| Time | Event |
|---------------|-----------------------------|
| 6:00 -> ~6:20 | Networking |
| 6:30 -> 7:00 | Intro & demo |
| 7:00 -> 8:00 | Sub groups- RL fundamentals |
| 8:00 + | Wrap Up |

How to install the GAZ syllabus into Goose

All the steps in one place:

<https://tinyurl.com/GAZinstallation>

Let's go through them one
by one

1. Goose Desktop App Installation

<https://tinyurl.com/blockgoosealphazero>

2. API Key For Goose

<https://alpha-zero-goose.vercel.app/>

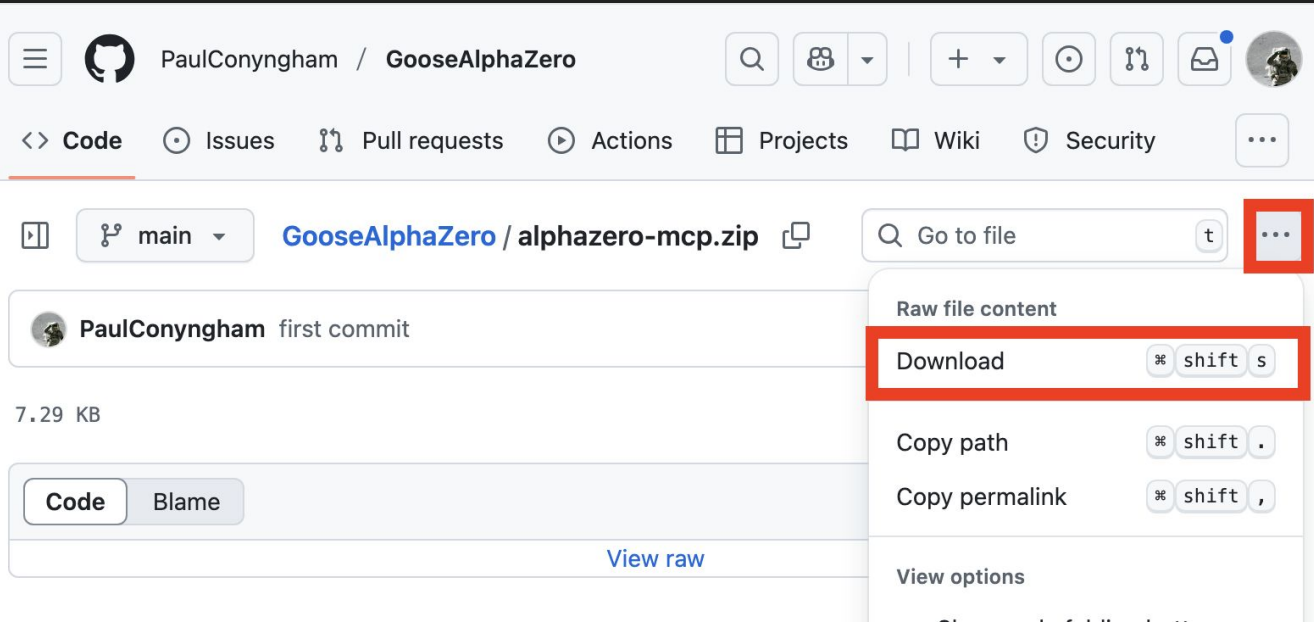

Write the api key down

3. Download & unzip the GooseAlphaZero Extension

<https://tinyurl.com/GAZinstallation>

Go through steps and explain on github repo

The screenshot shows the GitHub interface for the repository 'PaulConyngham / GooseAlphaZero'. The file 'alphaszero-mcp.zip' is selected, and the 'Download' button in the file context menu is highlighted with a red box. The file size is 7.29 KB. The context menu also shows options for 'Copy path', 'Copy permalink', and 'View options'.

4. Configure open router

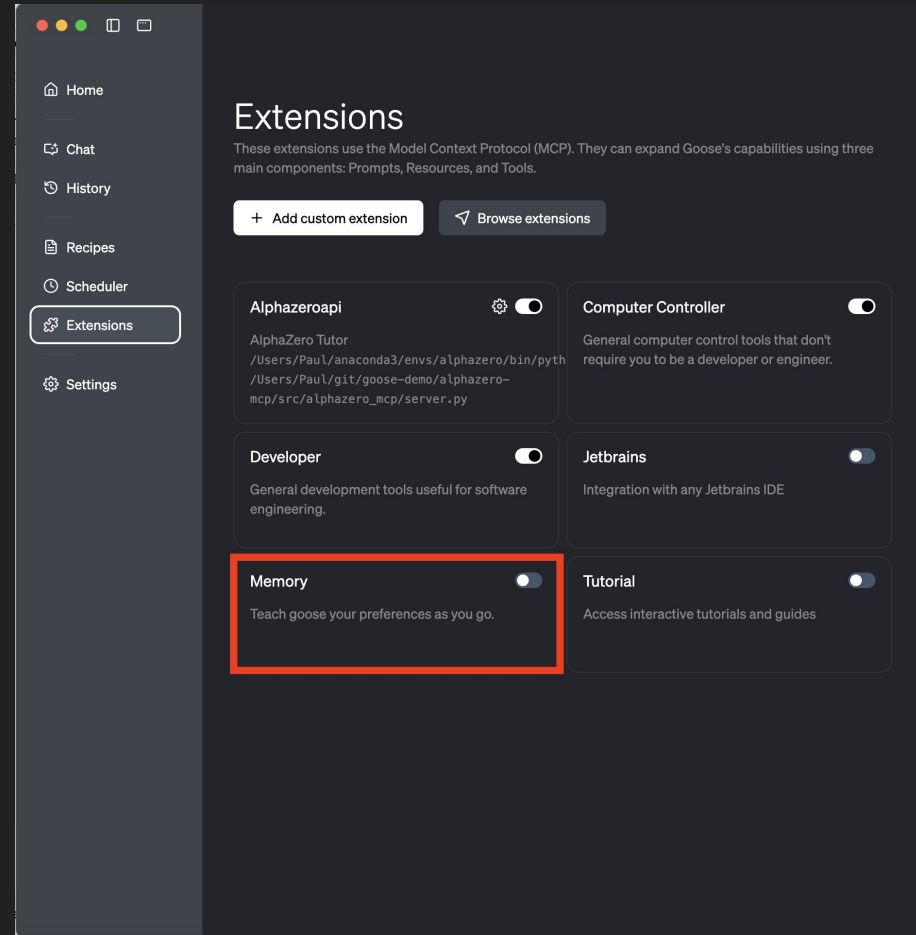

Go through steps using images on github repo

5. Add Custom Extension

Go through steps using images on github repo

6. Disable Memory Extension*

*For this study group only - feel free to turn it on for other things

7. Launch the Recipe

Use the github link for this

*here we are essentially loading in the system prompt

8. Provide your alias - not complete

Use the github link for this

*here we are essentially loading in the system prompt

1st Lesson Demo

Live demo 🙌 🙌

- “Choose your own adventure learning”
- Earn xp & work with your team to unlock projects
- How to resume your work

*here we are essentially loading in the system prompt
